# EMIS Web – Batch Data Manager

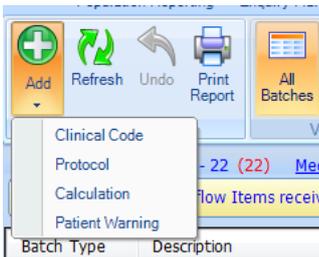

### Batch Data Manager

You can use the Batch Data Manager to add data to multiple patient records in one go.

1. Access **Population Reporting** and then click **Batch Data Manager** tab from the ribbon.

2. Click **Add** button, and select the type of data to batch add. You can add a clinical code, a protocol, a calculation or a patient warning in batch. In this example we're going to add a clinical code.

4. The first field is the batch data to add. Click **Magnifying glass** to find the data you want to add. In this case it will launch the code browser. Select the correct code to add.

**Clinical code to Add to Patient Record**

\* Batch Add

5. Enter some free text notes into the **Description** field

\* Description

6. Select the list type, this will be whether you're using a search – and you can choose to add it to the included or excluded population, or whether you're using an admin list or an appointment rota patient list.

List Type ▼

- Search Population (Included)
- Search Population (Excluded)
- Admin List
- Appointment Session

7. Once you have selected the list type, use the next magnifying glass to select your search or list.

After you have the search selected, the Batch data Manager will tell you how many patients your data will be added to.

8. Finally select when you want the data to be added. Select to add **Immediately** or **Schedule** a date and time if appropriate.

9. Click **OK**.

A **warning message** will be displayed, for you to double-check what data will be added.

10. Click **Add Batch** to proceed, or cancel to change your batch add action.

Your batch data will now show in the list along with date and status.

If you scheduled it to run immediately the status will now show **Running**.

Description	Date Actioned	Scheduled Date	Status	Type
Diabetic annual review Diary Entry Added In Bulk	08/03/2012 14:13:01	Immediate	Running	Clinical Code
QRISK cardiovascular disease 10 year risk score Score added for training	01/03/2012 13:28:28	Immediate	Complete	Running
BMI bmi	22/02/2012 15:26:13	Immediate	Pending	
O/E - blood pressure reading BP added for training	18/01/2012 14:24:19	Immediate	Complete	

11. Click **Refresh** button to update the status if needed. The **Status** will change to complete once finished.

**Note:** You have seven days after a batch has run to undo it – using the **Undo** button in the ribbon. However you cannot undo a protocol batch add action.
