Creating a New User Account

If the staff member is an existing user to SystemOne and is using a smartcard, **you must** create the account using the smartcard number. This will avoid conflicts with GMC Numbers and duplicate profiles.

1. Click **Set-up – Users & Policy – Staff and Organisation Set-up**
2. Click **New Staff**
3. Type the **smartcard number** into the GMC / NMC / RPSGB / GPhC / UUID field and click **Ok**

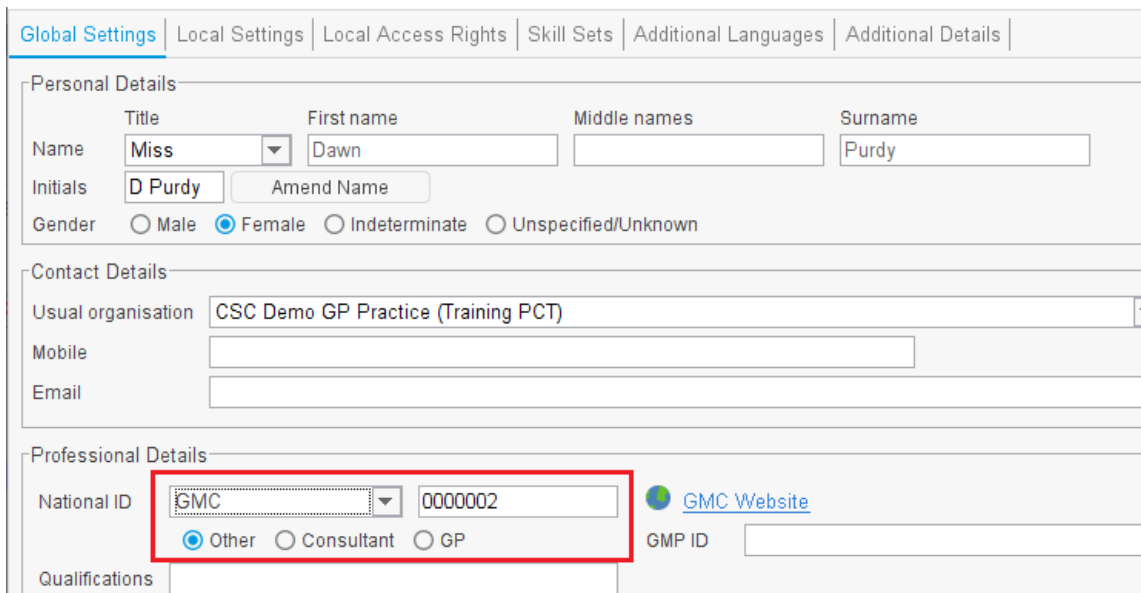

4. A dialogue will display listing the staff who match the details you have entered. Ensure you select the correct name and click **Ok**
5. The **Amend Staff Details** dialogue will display. Complete as follows:
 - a. **Global Settings** - The staff members main practice details will display and they can also use their existing username and password

The **GMC Number / NMC** will automatically display as this is associated with the smartcard, however this can be added if necessary.

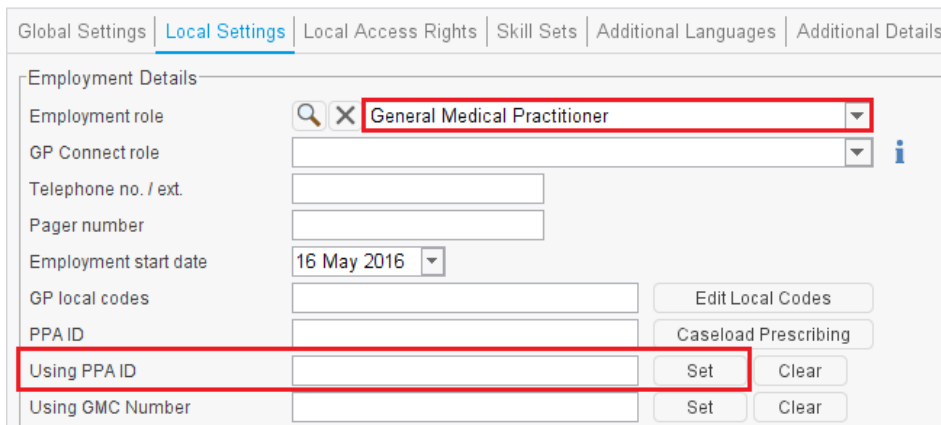

For admin or clinicians without a Professional ID (HCAs) who need to access ICE this should be **Pathology ID** alternatively select **Local Person ID**

Ensure Other is selected as this is not main practice for the user

- b. **Local Settings** - Select an appropriate **Employment role** e.g. General Medical Practitioner (this will be overwritten to what is set on the smartcard)

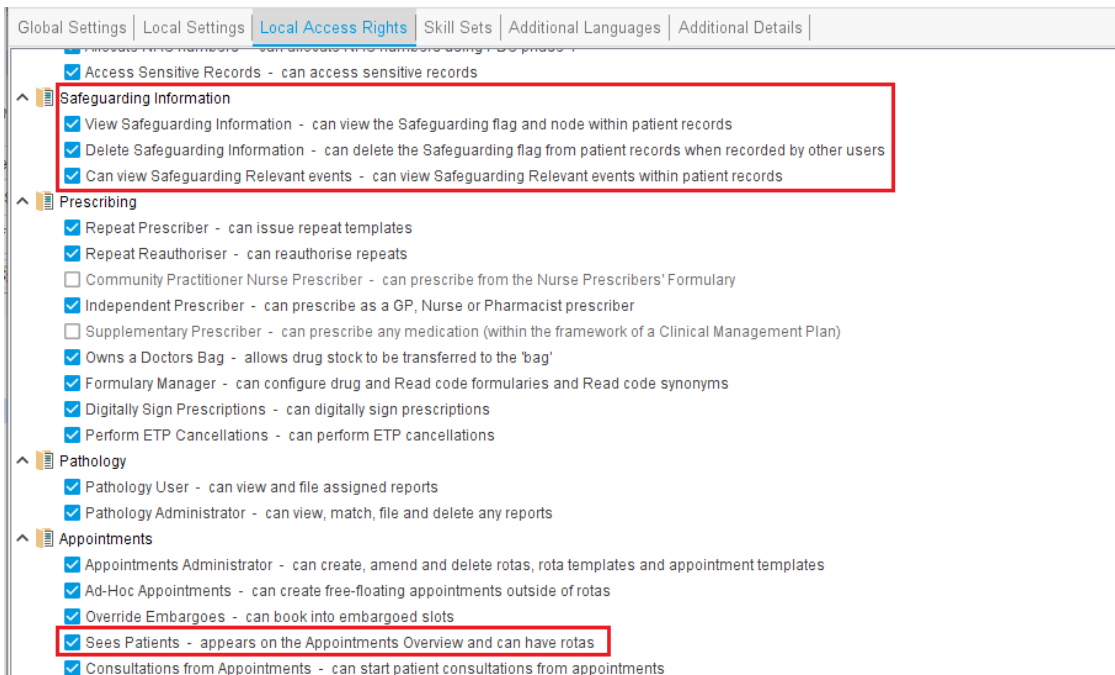

If this is not the clinician's usual practice **you must** select **Set - Using PPA ID** and select an appropriate GP if they will be signing prescriptions (Nurses, ACPs and Pharmacists do not require a PPA ID to be set)

- c. **Local Access Rights** - The local access rights will automatically populate when the staff member logs in with their smartcard. However **you must** click the relevant **Safeguarding Information** access and **Sees Patients (for Clinicians)** within the appointment section

Note: Review all other rights to match local practice policy.

6. When the staff details are complete click **Ok**

Organisation Preferences

Organisation preferences will need to be updated to allow the clinician to visit patients, refer patients, override medication warnings etc.

1. Set-up – Users & Policy – Organisation Preferences

Review and update the following if necessary:

- a. **Appointment – Appointment Bookmarks.** If the practice have organisation bookmarks you may want to include staff in to relevant groups. Select an **existing bookmark** and tick to select the **new staff member**

- b. **Block Appointments - Add to can block appointments** if necessary

Partners in improving local health

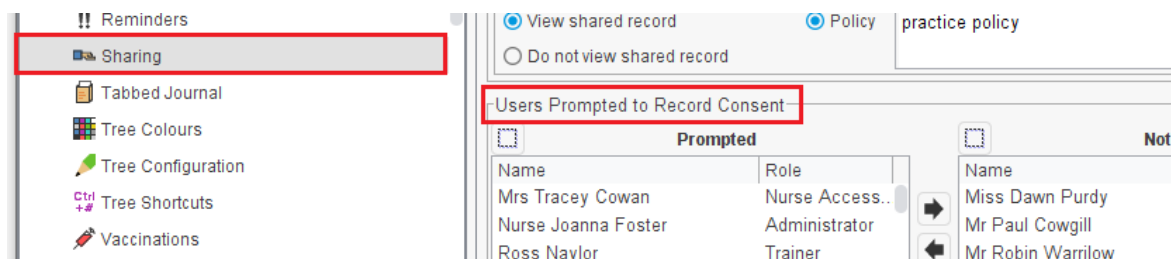

c. **Staff Ordering** - Change order of staff when using the appointment ledger / overview

d. **Clinical Policy – Referrals Out.** Add the new user if they can refer patients

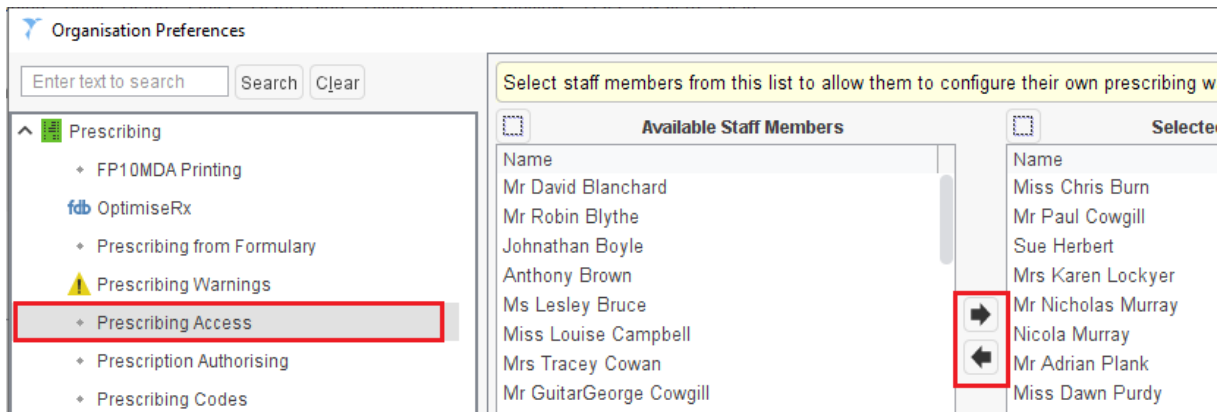

e. **Sharing** - If applicable select who is **prompted / not prompted** to complete consent to share.

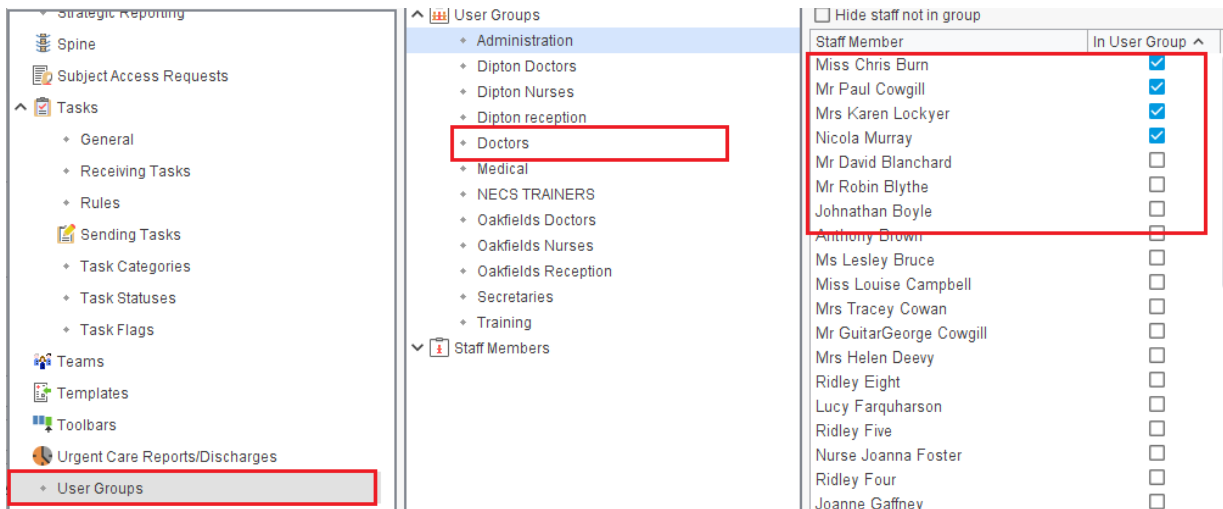

f. **Tabbed Journal** - If used and there are practice created filters, you may need to add the new staff member if a filter contains specific staff names.

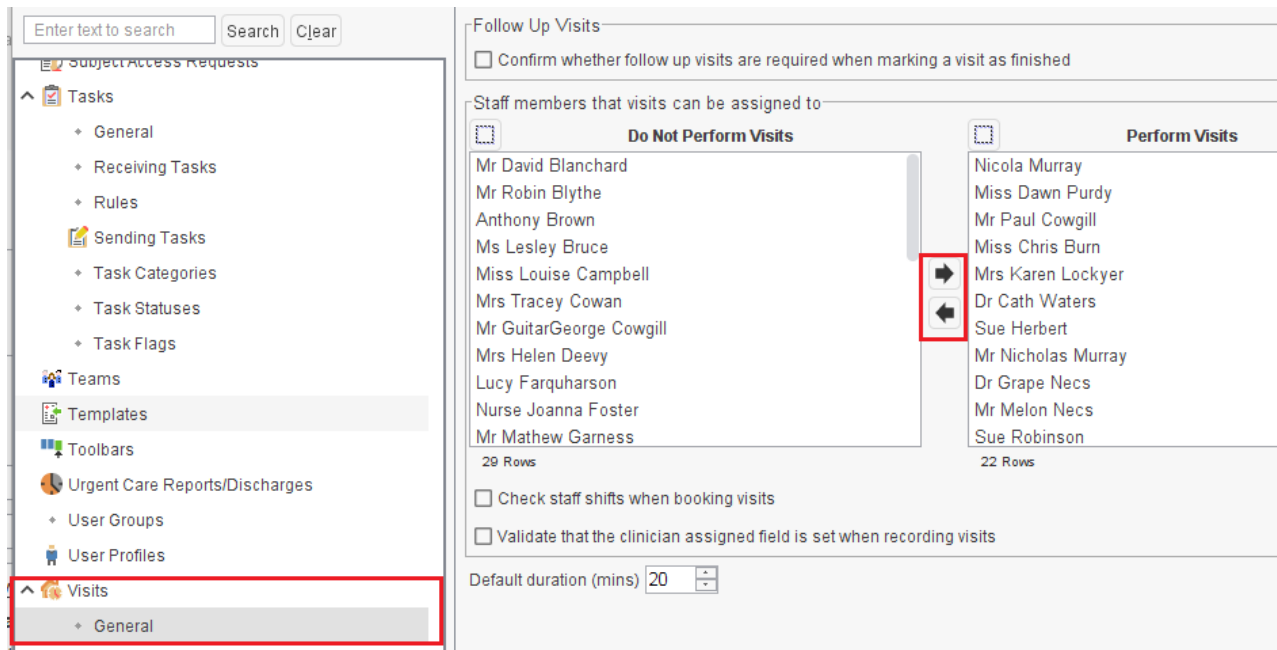

- g. **Prescribing – Prescribing Access.** Depending on your Prescribing Warnings you may want the new staff member to **configure their own prescribing warnings (Clinical prescribers only)** e.g. override sensitivities and allergies. Move from the left pane to the right.

- h. **User Groups -** You may want to add the new staff member to existing user groups for tasks and notifications. Select an **existing group** and **tick to select** from the right pane the staff member.

- i. **Visits – General.** If the staff member will be allocated home visits add them to **Perform Visits**.

Mr Mathew Garness	Sue Robinson

29 Rows 22 Rows

Check staff shifts when booking visits

Validate that the clinician assigned field is set when recording visits

Default duration (mins) 20

2. Click **Ok** to save the organisation preferences.

User Preferences

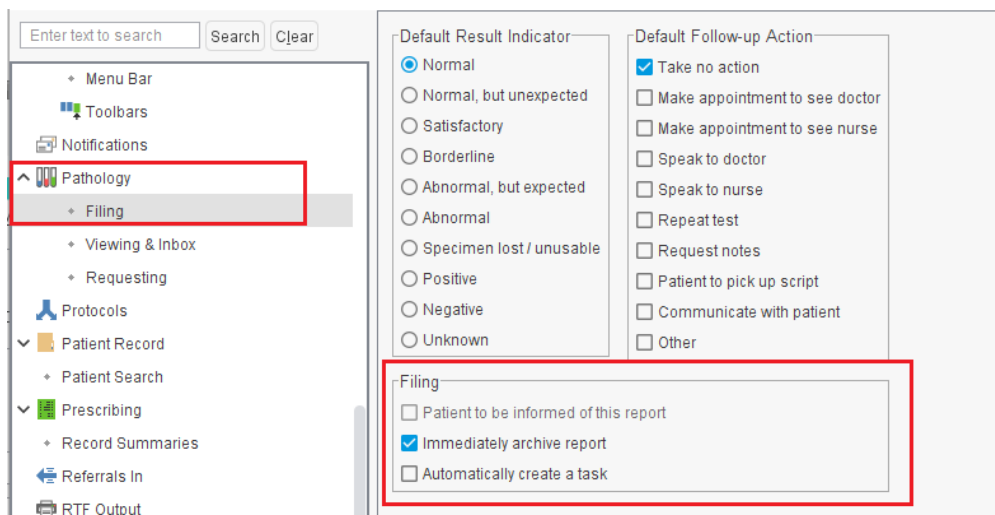

Once the user has logged on to SystemOne, they must update their user preferences.

Note: For Clinical staff, you may need to check with an existing GP to ensure these settings match, alternatively you can select to **Copy from Another User**.

1. User – User Preferences

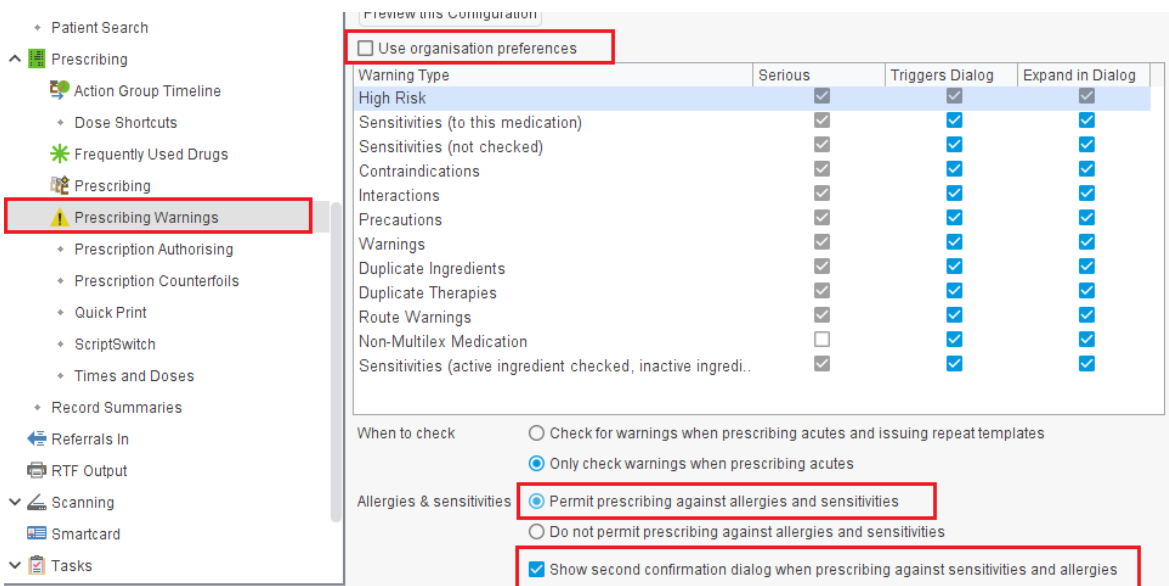

Review and update the following:

- a. **Pathology Filing.** This will need to match what the current practice process is for filing pathology results

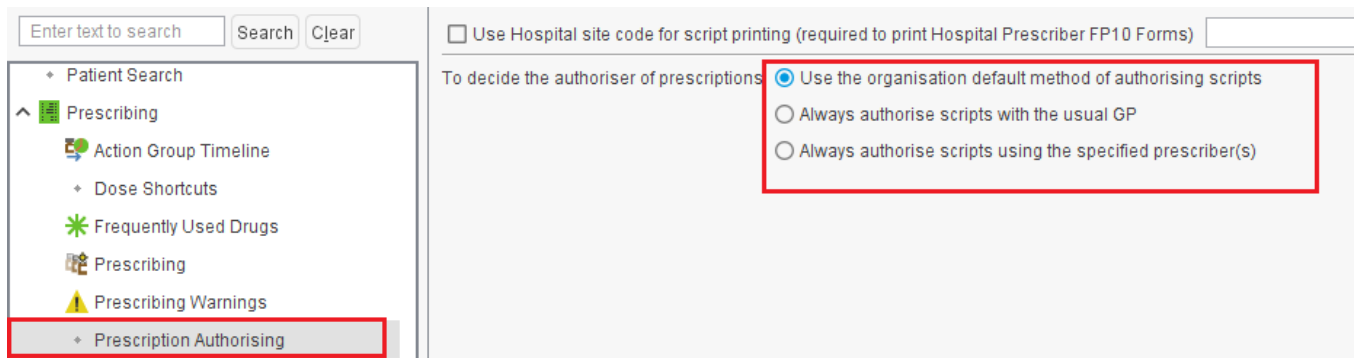

The screenshot shows the SystemOne user preferences interface. On the left is a navigation menu with a search bar at the top. The 'Pathology' menu item is highlighted with a red box. The main content area is divided into two columns. The left column is titled 'Default Result Indicator' and contains a list of radio button options: Normal (selected), Normal, but unexpected, Satisfactory, Borderline, Abnormal, but expected, Abnormal, Specimen lost / unusable, Positive, Negative, and Unknown. The right column is titled 'Default Follow-up Action' and contains a list of checkbox options: Take no action (checked), Make appointment to see doctor, Make appointment to see nurse, Speak to doctor, Speak to nurse, Repeat test, Request notes, Patient to pick up script, Communicate with patient, and Other. At the bottom of the right column, there is a section titled 'Filing' which is also highlighted with a red box. It contains three checkbox options: Patient to be informed of this report (unchecked), Immediately archive report (checked), and Automatically create a task (unchecked).

- b. **Prescribing – Prescribing Warning.** Untick use organisation preferences, click **Permit prescribing against allergies and sensitivities**

c. **Prescription Authorising** - Ensure **Use the organisation default method of authorising scripts** is selected for all clinical prescribers

For **Non Prescribers** (no signing) this must be set as **Always authorise scripts with the usual GP**

2. Click **Ok** to save the user preferences
