

## NECS Clinical Systems Specialist Team SystemOne - Sensitivities & Allergies

### Adding a Drug Allergy or Sensitivity

1. From the patient record right click **Sensitivities & Allergies** node of the clinical tree and select **Record Allergy or Sensitivity**

2. Select **Drug sensitivity** in the Record section
3. Click **Select Drug or Appliance** Icon (brown bottle) to select a Drug

4. Type the name (or first few letters) of the drug into the Search for box and click **Search**.
5. Select the correct drug from the list and click **Ok**.
6. If you want to record sensitivity to a specific formulation of a drug, make sure you select a branded version. If an exact formulation is not required just select anything from the list and click **Ok**
7. If a specific formulation was chosen for a reason then make sure to click the **Sensitivity is specific only to this manufacturer's product** in this formulation tick box. This makes the allergy specific to the drug formulation chosen otherwise you will be recording a generic allergy to the drug as a whole (the most likely option)

8. Enter any comments as required e.g. "Rash" or "Nausea" and choose a start date if you do not want to use today's date

- If you want to check the newly added allergy against existing medication then make sure to click the **Check current medication against sensitivity** tick box, else click **Ok** or **Ok & Another** (if present)

Start date: 31 Mar 2020

Check current medication against sensitivity

- If the medication is checked then a list of all meds will appear with a green tick or a red cross next to them depending if they match the newly added allergy.

Medication	Sensitivity Interaction
Amoxicillin 250mg capsules	✗
Diazepam 5mg tablets	✓
Ibuprofen 400mg capsules	✓
Levothyroxine sodium 50microgram tablets	✓
Methotrexate 5mg/2ml solution for injection vials	✓
Naproxen 500mg tablets	✓
Paracetamol 500mg capsules	✓
Salbutamol 100micrograms/dose breath actuated inhaler CFC free	✓
Simvastatin 40mg tablets	✓

- If there is a medication that does clash, then you will be given the option to submit a “Yellow Card”. Please see the GP for further info on this.

**MHRA - Yellow Card Reporting Guidance:**

Please use the Yellow Card Scheme to tell the MHRA about:

- All suspected adverse drug reactions for new medicines - identified by the black triangle ▼ symbol
- All serious\* suspected adverse drug reactions in adults and children for established vaccines and medicines, including unlicensed medicines, herbal or homeopathic remedies, and medicines used off-label
- All medication errors that result in an adverse reaction, if not reported to National Reporting Learning System (NRLS)

\*Reactions which are fatal, life-threatening, a congenital abnormality, disabling or incapacitating, result in or prolong hospitalisation, or medically significant are considered serious.

Do you want to submit a Yellow Card for this sensitivity?

Yes No Do Later

## Adding an ‘Other’ Allergy or Sensitivity

- If you wish to add a sensitivity that is not drug based e.g. peanut or bee sting then you need to select **Other allergy** in the Record section

Record:  No known allergies 1151,  Drug sensitivity,  Other allergy

Allergy: **R** X

Comments:

- Click the **R** icon to search for the appropriate Read/SNOMED code for the allergy.
- Enter the allergy into the Search box and click the **Search** button. Highlight the correct Read/SNOMED code and click **Ok**
- Enter any comments such as “Rash” etc. and click **Ok**

**Note:** Drug sensitivities can also be entered using Other allergy. For example a Penicillin allergy can be entered instead of choosing between Penicillin V and/or Penicillin G as a drug sensitivity.
